

Green Sheet

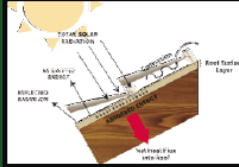

Heat Gain Reduction

The Gerard Stone-Coated Steel Roofing System reduces heat gain by as much as 45% over conventional asphalt roofing systems. Gerard uses highly UV-reflective granite stone chips which are sealed to the tough Zinc-Aluminum steel substrate. The Gerard system allows air to pass between the deck and the panels. When air convection is combined with the highly reflective Gerard steel and stone roofing, the result is one of the most energy efficient and eco-friendly roofing systems in the world.

GERARD'S GREEN SHEET

1. Made with over 30% recycled steel
2. Steel is 100% recyclable
3. Recycles the majority of their waste
4. California Title 24 compliant
5. Qualifies for LEED credits
6. Purchases packaging from vendors who recycle

Subject: Fwd: my roof
Hi Matt,

Hope all is well. Today while working in the yard I realized that my gable fan wasn't running. It was 92 degrees outside and I knew that the attic temperature had to be at least 120 degrees. My attic fan automatically turns on when the temperature reaches 105 so I went into my attic to see what was wrong. I couldn't believe it. The attic was only 94 degrees! Two degrees warmer than outside with a bright sun. I've seen it with my own eyes. The new roof you installed is going to cut my A/C bill way down. Plus we have received several compliments on the appearance of our home. We are so pleased and had to let you know. Thanks a lot.

Hi Rick

In the summer when I only had one side of the garage roof finished: Gerard on one side with only tar paper on the other. I went in the attic with a digital laser thermometer. I pointed it at the finished side (Gerard) the temperature was 90 degrees, the other side (tar paper) was 116 degrees. The Gerard side was 26 degrees cooler. You were absolutely right about how energy efficient my Gerard Stone-Coated Steel roof is. See the pictures. P.S.: The roof looks great. I will send more photos later.

This past year I installed the Gerard Roofing System on my home using counter battens with ridge vents. My utilities dropped 30%. Absolutely amazing.
