**Commercial & Residential**

## All Types of Re-roofing & Repairs

# Gerard Stone-Coated Metal Roofing Systems

**Fire** The interlocking panels and innovative fastening system reduce the threat of wind blown embers reaching the roof deck below. Gerard comes with a UL 790 Class "A" Fire rating (highest rating in the industry).

**Hail** 2.5" hail warranty and is UL 2218 Class 4 rated (highest rating in the industry).

**Wind** 120 mph wind warranty. Has withstood wind tests of 170 mph with no damage.

**Earthquake** Superior features reduce the treat of roof collapse. When the McMullen Company surveyed the 1994 Northridge, California earthquake they found only minor damage to 1% of homes protected by stone-coated metal roofing. In contrast, more than 50% of the homes with concrete and clay roofs had significant damage.

**Weathering** The stone-coated metal panels will not split, crack, break, curl, warp or absorb water. The stone granules are UV-reflective and provide protection against the elements.

**Lightweight** At only 1.4 lbs per square foot, structures do not need re-engineering to accommodate the Gerard roofing system.

**Environment** 100% recyclable with over a 30% recycled steel content. Rest assured Gerard is doing their part to conserve our natural resources.

**Insurance Discounts** In many areas where weather damage is prevalent, insurance companies offer substantial premium reductions to homeowners with a Gerard roof.

Gerard's product line has premium curb appeal, is virtually maintenance free, and according to the Residential Cost Handbook, home values increase \$1.35/sq. ft. with metal roofs vs. wood shake or asphalt composition.
